APICOLTURA ANTOS

Category: Pastry, honey, chocolate, jam
business description:

Giulio Mortara guarantees the value of his products starting with the genealogy of the bees: he fertilises them artificially, obtaining new crossbreeds from the Apis Ligustica, a valuable Italian breed. The same care is given to the production of high quality honey, obtained from the work of nomad bees. The honey ranges from orange to acacia, from mountain millefiori to lavender, from chestnut to lime. Of considerable interest are also the cosmetic products, naturally honey based, such as shampoo, body wash, creams, soaps and deodorants, now well-known abroad.
